PROFESSIONAL SUMMARY

AI & ML undergraduate with practical experience building real-time computer vision systems and interactive web applications. Experienced in implementing YOLOv8-based detection pipelines, designing responsive front-end interfaces, and integrating database-backed systems. Strong interest in applied AI, web engineering, and cloud-based deployment.

EDUCATION

B.E. in Artificial Intelligence & Machine Learning

CGPA: 7.39 (as of 5th Semester)

Poojya Doddappa Appa College of Engineering, Kalaburagi
2023 - 2027

Pre-University (12th Grade)

Score: 92.5%

Al-Sharay PU College, Kalaburagi
March 2023

PROJECTS

UZAIF — Spider-Verse Portfolio

2026

HTML5, CSS3, JavaScript, Canvas API, Intersection Observer API

- Built a fully animated Spider-Verse themed portfolio with custom cursor, glitch typography, and scroll-based UI interactions.
- Implemented dynamic canvas-based background rendering and intersection-observer driven card animations.
- Developed responsive immersive UI using advanced CSS layering and animation techniques.

Live Demo

RuleCop — AI-Based University Violation Detection System

2025

Python, YOLOv8, OpenCV, MySQL, HTML, CSS

- Built real-time YOLOv8 system processing 25 FPS video with >88% detection accuracy using YOLOv8 for uniform violation and loitering detection.
- Integrated OpenCV frame processing with optimized MySQL schema for structured violation logging.
- Built administrative dashboard and improved detection reliability using model evaluation metrics.

Research Paper

GitHub

TECHNICAL SKILLS

Programming Languages: Python, C++, JavaScript (Basic)

AI / ML: Machine Learning, Deep Learning, Computer Vision, YOLOv8, Model Evaluation

Libraries & Tools: OpenCV, NumPy, Pandas, Jupyter Notebook, Google Colab, VS Code

Cloud Computing: AWS (EC2, S3, IAM, VPC, Lambda – Concepts) **Databases:** MySQL, SQLite

Web Technologies: HTML, CSS

Core Concepts: Data Structures, Algorithms, OOP, DBMS, Operating Systems
