🌐 Portfolio

Cloud Engineer | AWS

PROFESSIONAL SUMMARY

Cloud-focused engineering student with hands-on experience working with AWS services including EC2, S3, IAM, VPC, and Lambda concepts. Skilled in building scalable applications, deploying backend systems, and integrating databases with cloud-based infrastructure. Experienced with Python-based systems, automation, and backend services. Seeking opportunities to build reliable, scalable cloud solutions and infrastructure.

EDUCATION

B.E. in Artificial Intelligence & Machine Learning

CGPA: 7.39 (5th Semester)

Poojya Doddappa Appa College of Engineering, Kalaburagi
2023 – 2027

Pre-University (12th Grade)

Score: 92.5%

Al-Sharay PU College, Kalaburagi
March 2023

PROJECTS

RuleCop - AI-Based University Violation Detection System

2025

Python, OpenCV, YOLOv8, MySQL, Web Dashboard

- Developed a real-time computer vision system capable of processing 25 FPS video streams with over 88% detection accuracy.
- Designed a structured MySQL database schema for storing violation logs and analytics.
- Built a web-based administrative dashboard for monitoring detection results and system output.
- Implemented backend processing pipelines handling video ingestion, detection, and data storage.

Research Paper

GitHub

Personal Portfolio Website

2026

HTML5, CSS3, JavaScript, Vercel

- Built and deployed a personal developer portfolio showcasing projects, skills, and certifications with a clean, responsive UI.
- Deployed on Vercel with continuous deployment linked to GitHub for seamless updates.

Live Demo

GitHub

Spider-Verse Developer Portfolio

2026

HTML5, CSS3, JavaScript, Canvas API

- Designed and deployed a fully interactive developer portfolio featuring animated UI components and dynamic visual effects.
- Implemented advanced front-end rendering using Canvas API and scroll-based interaction systems.
- Structured modular frontend architecture and deployed the application for public access.

Live Demo

PayOff - Offline Token-Based Payment Application

2025 – Present

Python, MySQL, AWS (EC2, S3, RDS) – In Progress

- Designing a token-based offline payment system enabling transactions without continuous internet connectivity.
- Planning cloud deployment on AWS EC2 with RDS for persistent transaction storage and S3 for secure data backups.

- Architecting backend services for token generation, validation, and reconciliation with cloud-synced ledger.

FuelQ - Smart Fuel Availability & Slot Booking App
Python, MySQL, AWS (EC2, S3) – In Progress

2025 – Present
Selected for NAIN 2.0 Initial Funding

- Building an application for delivery riders, drivers, and daily commuters to check real-time fuel availability and book fueling slots, reducing wait times.
- Selected by NAIN 2.0 for initial funding, validating the product’s market potential.
- Planning AWS-based backend deployment for scalable slot management and real-time fuel station data integration.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Lambda – Concepts)
Programming Languages: Python, C++, JavaScript (Basic)
Cloud & Backend Concepts: Cloud Computing, Distributed Systems Basics, API Integration, Backend Processing
Databases: MySQL, SQLite
Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Google Colab
Libraries: OpenCV, NumPy, Pandas
Web Technologies: HTML, CSS
Core Computer Science: Data Structures, Algorithms, DBMS, Operating Systems
